IS101 — Excel E3: Manage Tables & Table Data

College of Southern Nevada

Practice Instructions

Download and open your **Excel_E3_Starter** file. Work through each skill below using the steps provided — each skill lists what to do, exactly how to do it, and what the result should look like. Check off each skill on the IS101 reference page as you complete it.

Skills in This Guide

1. Create an Excel Table from a Cell Range
2. Apply Table Styles
3. Convert a Table to a Cell Range
4. Add or Remove Table Rows and Columns
5. Configure Table Style Options
6. Insert and Configure a Total Row
7. Filter Records
8. Sort Data by Multiple Columns

1. Create an Excel Table from a Cell Range

Your Task: Convert the event data range into a structured Excel Table with filter dropdowns.

STEP-BY-STEP INSTRUCTIONS

1. Click any cell inside the data range.
2. Press Ctrl+T.
3. Confirm “My table has headers” is checked and click OK.

WHAT THE RESULT LOOKS LIKE

The range now has banded row shading and a filter arrow on every header cell, and Table Design becomes available on the ribbon.

---

2. Apply Table Styles

Your Task: Give the table a different built-in color style than its default.

STEP-BY-STEP INSTRUCTIONS

1. Click any cell inside the table.
2. Click Table Design → Table Styles gallery.
3. Click a different style thumbnail to apply it.

WHAT THE RESULT LOOKS LIKE

The table's banding colors and header shading change instantly to match the new style, without altering the data.

---

3. Convert a Table to a Cell Range

Your Task: Convert the Excel Table back into a plain range once you no longer need table features.

STEP-BY-STEP INSTRUCTIONS

1. Click any cell inside the table.
2. Click Table Design → Convert to Range.
3. Click Yes to confirm.

WHAT THE RESULT LOOKS LIKE

The filter arrows and Table Design tab disappear, though the data and any banded shading you kept remain as plain cells.

---

4. Add or Remove Table Rows and Columns

Your Task: Add a new row at the bottom of the table and a new column at its right edge.

STEP-BY-STEP INSTRUCTIONS

1. Click the last cell of the table's last row and press Tab to add a new row.
2. Type data in a cell just to the right of the table's last column to extend it automatically.
3. To remove a row, right-click a row inside the table → Delete → Table Rows.

WHAT THE RESULT LOOKS LIKE

The table's blue border automatically expands to include the new row and column, or contracts after a deletion.

5. Configure Table Style Options

Your Task: Turn on Banded Rows and a Total Row, and turn off the Filter Button, from the Table Style Options group.

STEP-BY-STEP INSTRUCTIONS

1. Click any cell inside the table.
2. Click Table Design.
3. In the Table Style Options group, check Banded Rows and Total Row, and uncheck Filter Button.

WHAT THE RESULT LOOKS LIKE

Alternating row shading and a new total row appear, and the header dropdown arrows disappear.

---

6. Insert and Configure a Total Row

Your Task: Add a Total Row to the table and set it to sum one of the numeric columns.

STEP-BY-STEP INSTRUCTIONS

1. Click any cell inside the table.
2. Click Table Design → check Total Row.
3. Click the cell in the Total Row under the numeric column, click its dropdown, and choose Sum.

WHAT THE RESULT LOOKS LIKE

A new row appears below the table's last row, showing the sum of the chosen column and blank for the others.

---

7. Filter Records

Your Task: Filter the table to show only rows matching one specific value in a column.

STEP-BY-STEP INSTRUCTIONS

1. Click the filter arrow on the header of the column to filter.
2. Uncheck Select All, then check only the value you want to keep.
3. Click OK.

WHAT THE RESULT LOOKS LIKE

Only rows matching the checked value remain visible; the rest are temporarily hidden, and the filter arrow shows a funnel icon.

---

8. Sort Data by Multiple Columns

Your Task: Sort the table first by one column, then by a second column as a tiebreaker.

STEP-BY-STEP INSTRUCTIONS

1. Click any cell inside the table.
2. Click Data → Sort.
3. Set the first Sort By column and order, click Add Level, set the second column and order, then click OK.

WHAT THE RESULT LOOKS LIKE

Rows reorder by the first column, and any rows that tie on that column are ordered by the second column.
