IS101 — Excel E1: Manage Worksheets & Workbooks

College of Southern Nevada

Practice Instructions

Download and open your **Excel_E1_Starter** file. Work through each skill below using the steps provided — each skill lists what to do, exactly how to do it, and what the result should look like. Check off each skill on the IS101 reference page as you complete it.

Skills in This Guide

1 Import Data from a Text File
2 Import Data from an Online Source
3 Search for Data Within a Workbook
4 Navigate to Named Cells or Ranges
5 Insert and Remove Hyperlinks
6 Modify Page Setup
7 Adjust Row Height and Column Width
8 Customize Headers and Footers
9 Customize Options and Views
10 Manage the Quick Access Toolbar
11 Display Worksheets in Different Views
12 Freeze Rows and Columns
13 Change Window Views
14 Modify Built-in Workbook Properties
15 Display Formulas
16 Set a Print Area
17 Save or Export in Alternative File Formats
18 Configure Print Settings
19 Inspect Workbook and Correct Issues
20 Manage Comments and Notes

1. Import Data from a Text File

Your Task: Your worksheet needs the latest expense figures, which arrive as a CSV export from the accounting system.

STEP-BY-STEP INSTRUCTIONS

1. Click the Data tab.
2. Click Get Data → From File → From Text/CSV.
3. Select Excel_Practice_Import.csv and click Import.
4. In the preview window, click Load.

WHAT THE RESULT LOOKS LIKE

The CSV data loads into a new table starting at the cell you selected, indistinguishable from typed data.

---

2. Import Data from an Online Source

Your Task: You want to pull a small reference table directly from a web page instead of retyping it.

STEP-BY-STEP INSTRUCTIONS

1. Click the Data tab.
2. Click Get Data → From Other Sources → From Web.
3. Enter a URL that contains a table and click OK.
4. Select the table in the Navigator pane and click Load.

WHAT THE RESULT LOOKS LIKE

The web table's data appears in your worksheet exactly as if you had typed it in.

---

3. Search for Data Within a Workbook

Your Task: You need to find every cell that mentions “Revenue” without scrolling through each sheet by hand.

STEP-BY-STEP INSTRUCTIONS

1. Press Ctrl+F to open Find and Replace.
2. Type Revenue in the Find what box.
3. Click Find All to see every match listed at once.
4. Click any result row to jump straight to that cell.

WHAT THE RESULT LOOKS LIKE

Excel lists every matching cell with its sheet and address, and jumps to whichever one you click.

© Dr. Mark Taormino · All Rights Reserved · College of Southern Nevada

4. Navigate to Named Cells or Ranges

Your Task: Jump directly to the named range Revenue_Total using the Name Box instead of scrolling to find it.

STEP-BY-STEP INSTRUCTIONS

1. Click the Name Box at the top-left of the grid (left of the formula bar).
2. Type Revenue_Total and press Enter.
3. Alternatively, press Ctrl+G (Go To), choose the name from the list, and click OK.

WHAT THE RESULT LOOKS LIKE

The view jumps to and selects the named range, wherever it happens to be in the workbook.

---

5. Insert and Remove Hyperlinks

Your Task: Add a link from a cell to a related worksheet or web page, then practice removing one.

STEP-BY-STEP INSTRUCTIONS

1. Select the cell that should become a link.
2. Press Ctrl+K to open Insert Hyperlink.
3. Enter a web address or pick “Place in This Document” for an internal link, then click OK.
4. To remove a link later, right-click the linked cell and choose Remove Hyperlink.

WHAT THE RESULT LOOKS LIKE

The cell text turns into a clickable, underlined link; removing it restores plain formatted text.

---

6. Modify Page Setup

Your Task: Prepare the worksheet for printing by adjusting its orientation, paper size, and margins.

STEP-BY-STEP INSTRUCTIONS

1. Click the Page Layout tab.
2. Click Orientation and choose Landscape.
3. Click Size and confirm Letter is selected.
4. Click Margins → Narrow.

WHAT THE RESULT LOOKS LIKE

The worksheet's print layout switches to landscape with narrower margins, visible in Print Preview.

---

7. Adjust Row Height and Column Width

Your Task: The header row and one data column are too cramped to read comfortably — resize both.

STEP-BY-STEP INSTRUCTIONS

1. Select row 1 by clicking its row header.
2. Home → Format → Row Height → enter 22 → OK.
3. Select a data column, then Home → Format → Column Width → enter 16 → OK.
4. Alternatively, double-click a column border to AutoFit its width to content.

WHAT THE RESULT LOOKS LIKE

Row 1 is visibly taller and the chosen column is wider, with all text fully visible.

8. Customize Headers and Footers

Your Task: Add a header with the workbook title and a footer with the page number before printing.

STEP-BY-STEP INSTRUCTIONS

1. Click Insert → Header & Footer.
2. Click the center header box and type the worksheet title.
3. Scroll to the footer section, click the right footer box, then Design → Page Number.
4. Click outside the header/footer area to return to Normal view.

WHAT THE RESULT LOOKS LIKE

Page Layout view shows the typed title at the top of every page and a page number at the bottom.

---

9. Customize Options and Views

Your Task: Turn off gridlines on screen and switch on formula display from Excel's own options.

STEP-BY-STEP INSTRUCTIONS

1. Click File → Options → Advanced.
2. Scroll to “Display options for this worksheet.”
3. Clear the “Show gridlines” checkbox and click OK.
4. Reopen Options and re-check it to restore the default view.

WHAT THE RESULT LOOKS LIKE

Gridlines disappear from the worksheet view immediately after clicking OK, and return once re-checked.

---

10. Manage the Quick Access Toolbar

Your Task: Add a command you use often (for example, Quick Print) to the Quick Access Toolbar.

STEP-BY-STEP INSTRUCTIONS

1. Click the small dropdown arrow at the end of the Quick Access Toolbar.
2. Choose “More Commands.”
3. Select a command in the left list, click Add, then OK.
4. To remove it again, right-click the new icon and choose “Remove from Quick Access Toolbar.”

WHAT THE RESULT LOOKS LIKE

The new command's icon appears on the Quick Access Toolbar and can be clicked from any tab.

11. Display Worksheets in Different Views

Your Task: Switch between Normal, Page Layout, and Page Break Preview to see the sheet three different ways.

STEP-BY-STEP INSTRUCTIONS

1. Click the View tab.
2. Click Page Layout to see how the sheet will print, page by page.
3. Click Page Break Preview to see and adjust where pages will split.
4. Click Normal to return to the standard editing view.

WHAT THE RESULT LOOKS LIKE

The worksheet's appearance changes with each view, while the underlying data stays the same.

---

12. Freeze Rows and Columns

Your Task: Keep the header row visible while scrolling through a long list of data below it.

STEP-BY-STEP INSTRUCTIONS

1. Click the cell just below the header row (e.g., A2).
2. Click the View tab.
3. Click Freeze Panes → Freeze Panes.
4. Scroll down to confirm row 1 stays visible.

WHAT THE RESULT LOOKS LIKE

A thin line appears below row 1, and that row stays on screen no matter how far down you scroll.

---

13. Change Window Views

Your Task: View two different parts of the same workbook at once by opening a second window.

STEP-BY-STEP INSTRUCTIONS

1. Click the View tab.
2. Click New Window to open a second view of the workbook.
3. Click Arrange All, choose Vertical, and click OK.
4. Scroll each window independently to compare two areas side by side.

WHAT THE RESULT LOOKS LIKE

Two windows of the same workbook sit side by side, each scrollable on its own.

14. Modify Built-in Workbook Properties

Your Task: Fill in the workbook's title and author information so it's identifiable in file listings.

STEP-BY-STEP INSTRUCTIONS

1. Click File → Info.
2. Click in the Title field under Properties and type a workbook title.
3. Click in the Author field and enter a name.
4. Click the Back arrow to return to the workbook.

WHAT THE RESULT LOOKS LIKE

The Info screen shows the new title and author immediately under Properties.

---

15. Display Formulas

Your Task: Show every formula in the sheet at once instead of its calculated result, to check your work.

STEP-BY-STEP INSTRUCTIONS

1. Click the Formulas tab.
2. Click Show Formulas (or press Ctrl+`).
3. Review the formulas now visible in each cell.
4. Click Show Formulas again to switch back to results.

WHAT THE RESULT LOOKS LIKE

Every cell containing a formula displays the formula text itself instead of its calculated value.

---

16. Set a Print Area

Your Task: Limit printing to just the data table, not the entire worksheet.

STEP-BY-STEP INSTRUCTIONS

1. Select the range that contains the data table.
2. Click the Page Layout tab.
3. Click Print Area → Set Print Area.
4. Press Ctrl+P to preview and confirm only that range prints.

WHAT THE RESULT LOOKS LIKE

Print Preview shows only the selected range, and everything outside it is excluded from printing.

17. Save or Export in Alternative File Formats

Your Task: Save a copy of the workbook as a PDF and as a CSV file for sharing.

STEP-BY-STEP INSTRUCTIONS

1. Click File → Save As (or Export).
2. Choose a location, then set “Save as type” to PDF and save.
3. Repeat Save As, this time choosing CSV (Comma delimited) for the current sheet, and save.
4. Confirm both new files open correctly outside Excel.

WHAT THE RESULT LOOKS LIKE

A .pdf and a .csv version of the workbook now exist alongside the original .xlsx file.

---

18. Configure Print Settings

Your Task: Set the workbook to print on a single page wide and show gridlines when printed.

STEP-BY-STEP INSTRUCTIONS

1. Click File → Print to open the print settings pane.
2. Under Settings, click “Fit Sheet on One Page” → “Fit All Columns on One Page.”
3. Click Page Setup → Sheet tab → check Gridlines → OK.
4. Review the preview pane to confirm the layout.

WHAT THE RESULT LOOKS LIKE

The print preview shows all columns fitted to one page width, with gridlines included.

---

19. Inspect Workbook and Correct Issues

Your Task: Check the workbook for hidden personal information and accessibility issues before sharing it.

STEP-BY-STEP INSTRUCTIONS

1. Click File → Info.
2. Click Check for Issues → Inspect Document, then Inspect.
3. Review the results and click Remove All next to any category you want cleared.
4. Click Check for Issues → Check Accessibility to review any flagged issues.

WHAT THE RESULT LOOKS LIKE

The Document Inspector lists what it found in each category, and removed items no longer appear on re-inspection.

20. Manage Comments and Notes

Your Task: Add a note to a data cell flagging it for review, then reply to and resolve a comment.

STEP-BY-STEP INSTRUCTIONS

1. Right-click a cell and choose New Note; type a short message and click outside it.
2. Right-click another cell and choose New Comment; type a message and click Post.
3. Click the comment icon, type a reply in the reply box, and click Post.
4. Click the checkmark/“Resolve” control on the comment thread to mark it resolved.

WHAT THE RESULT LOOKS LIKE

A note appears as a small red-cornered indicator, and the comment thread shows your reply and a resolved status.
